

Apprentice Electrician

Reports to: Repairs and Voids or Capital Works Manager

The part I play at Bromford Flagship LiveWest to enable people to thrive is:

to participate in an Apprenticeship Programme, attending college and working alongside qualified Electricians. Under the guidance of qualified employees,

I carry out electrical installation works and electrical related repairs and maintenance on Flagship properties, supporting other trades and colleagues across the business as and when required, to provide an outstanding repairs service for our tenants and the homes they live in. I work 40 hours per week, on site from 8am until 5pm Monday to Thursday and 2.30pm on Friday when I am not attending college, and I am committed to studying for at least 20% of my working hours, completing course work on time and to a high standard and to pass assessments during and at the end of my apprenticeship.

I work efficiently and safely and strive to minimise waste when performing a range of electrical and associated tasks. Using various tools and equipment, I carry out works alongside qualified Electricians such as, but not restricted to, inspecting, testing, repairing, installing and modifying electrical components and systems. This may be carrying out repairs for our tenants or testing and improving electrical systems. I may work with schedules of rates to assess the work content of jobs and complete estimates, ensuring all work is completed to the required standard first time round, to ensure we're spending time and money wisely.

My skills and experience include:

I have GCSE Maths Level 4 (C) or above and GCSE English Level 4 (C) or above or am prepared to obtain the equivalent during my apprenticeship.

It is ideal, but not essential, to hold a full driving licence but if not, I must have a committed intention to learn to drive and passing my test by the end of my apprenticeship.

I am inquisitive, have a willingness to learn, listen and to ask questions. I work diligently, with good attention to detail and can record information accurately and follow detailed instructions.

I am competent in Microsoft applications such as Outlook and Teams.

The skills I will develop include:

My technical skills, knowledge and experience of electrical works including in addition to my practical skills, repairing or replacing parts as required, determining what equipment is required and assisting with preparing cost estimates.

My customer service, problem solving and decision-making skills.

My understanding and how to respond to any safeguarding and emergency situations that occur on-site.

Understanding and familiarity with a range of operational digital systems which will include a work scheduling system.
