

Information Security Analyst

Reports to: Head of Information Security, Risk and Compliance

The part I play at Bromford Flagship LiveWest to enable people to thrive is:

To support the effective delivery of Bromford Flagship LiveWest's information security activities and assist with the implementation of the security strategy within day-to-day operations.

I support the Head of Information Security, Risk and Compliance in the identification, review and monitoring of information security risks, escalating findings and decision-making as required while developing my expertise within established governance processes. Working with colleagues and stakeholders across the business, I support the review of third parties, projects, systems, software and processes to help identify and manage information security risks. Reviews of third parties also involve liaising with external stakeholders to gather and assess information relating to their security posture.

I assist in tracking compliance against recognised information security frameworks, such as Cyber Essentials, CIS, ISO 27k, and NIST, by working with colleagues in IT and Programme Delivery and other departments to collect evidence, document findings and track agreed improvement actions.

I also contribute to information security awareness and engagement initiatives across the organisation. I support teams and employees by providing clear, plain-English guidance on information security responsibilities and good practice, helping to reinforce and support a positive security culture.

I work closely with the Security Operations Manager on incident response and vulnerability management matters and the Security Assurance Manager on assurance related activities.

I keep up to date with developments in the information security sector and threat landscape to enable me to contribute to a proactive Information Security service. I also assist the Head of Information Security, Risk and Compliance in monitoring security performance and identifying opportunities for continuous improvement within Bromford Flagship LiveWest.

My skills and experience include:

High-level information security knowledge and experience, including best-practice, relevant frameworks, risk management and technical expertise. This is supported by experience in governance, risk and compliance.

Excellent communication skills with the ability to work with all levels of seniority and technical expertise. I am organised and have a positive collaborative attitude.

I have technical knowledge and experience of Microsoft 365 and Azure cloud services.

Ideally, I hold a degree in a relevant technical subject or a relevant professional qualification.

The skills I will develop include:

A deep understanding of the social housing sector and the organisation in order to contribute to and flourish in an environment focused on continuous improvement.

I will also have the opportunity to develop my information security knowledge and skills through training, experience and the support of colleagues.

By working in a large IT and Programme Delivery team in one of the largest housing associations in the UK I will develop excellent professional skills.
